

**Before next class:**

- **Watch videos 4.3, 4.4**

## Worm up

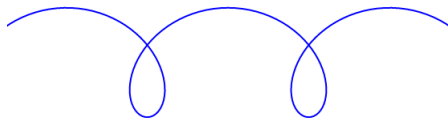

A worm is crawling accross the table. The path of the worm looks something like this:

True or False?

The position of the worm is a function.

# Worm function

A worm is crawling accross the table.

For any time  $t$ , let  $f(t)$  be the position of the worm.

This defines a function  $f$ .

- (A) What is the domain of  $f$ ?
- (B) What is the codomain of  $f$ ?
- (C) What is the range of  $f$ ?

## Function, number, or nonsense?

Let  $f, g$  be functions. Let  $x$  be a number. Classify each expression as a **function**, **number**, or **nonsense**.

(A)  $f(x)$

(B)  $f \circ g$

(C)  $f \circ (g(x))$

(D)  $(f \circ g)(x)$

(E)  $f(x) \circ g(x)$

(F)  $f(x)g(x)$

(G)  $f(g(x))$

(H)  $f(g)$

(I)  $f(g)(x)$

(J)  $f(g(x)f(x))$

(K)  $e^x$

(L)  $\ln x$

(M)  $\ln$

(N)  $\sin \circ e^x$

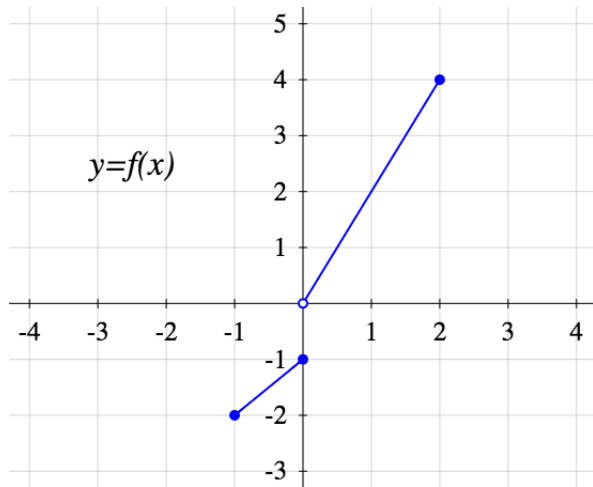

(O)  $\sin \circ \ln$

(P)  $(\ln \circ \sin)(e^x)$

(Q)  $e^x \circ \sin$

(R)  $\sin^2$

# Inverse function from a graph

Calculate:

- (A)  $f(2)$
- (B)  $f(0)$
- (C)  $f^{-1}(2)$
- (D)  $f^{-1}(0)$
- (E)  $f^{-1}(-1)$

## Absolute value and inverses

Let

$$h(x) = x|x| + 1$$

(A) Calculate  $h^{-1}(-8)$ .

## Absolute value and inverses

Let

$$h(x) = x|x| + 1$$

- (A) Calculate  $h^{-1}(-8)$ .
- (B) Sketch the graph of  $h$ .
- (C) Find an equation for  $h^{-1}$ .
- (D) Sketch the graph of  $h^{-1}$ .
- (E) Verify that
  - for every  $t \in \boxed{???}$ ,  $h(h^{-1}(t)) = t$ .
  - for every  $t \in \boxed{???}$ ,  $h^{-1}(h(t)) = t$ .

## Composition and inverses

Assume for simplicity that all functions in this problem have domain  $\mathbb{R}$ .

Let  $f$  and  $g$  be functions. Assume they each have an inverse.

Is  $(f \circ g)^{-1} = f^{-1} \circ g^{-1}$ ?

- If YES, prove it.
- If NO, fix the statement.

## Composition and inverses

Assume for simplicity that all functions in this problem have domain  $\mathbb{R}$ .

Let  $f$  and  $g$  be functions. Assume they each have an inverse.

Is  $(f \circ g)^{-1} = f^{-1} \circ g^{-1}$ ?

- If YES, prove it.
- If NO, fix the statement.

If you do not know how to start, experiment with the functions

$$f(x) = x + 1, \quad g(x) = 2x.$$

## Warmup:

$f$  is defined so that for  $t \in \mathbb{R}$ , we have  $f(t) = (|t|, -|t|)$ .

$g$  is defined so that for  $t \in \mathbb{R}$ , we have  $g(t) = \pm|t|$ .

For each of  $f$  and  $g$ , find a domain/codomain such that they are a function, or explain why you can't.

## Before next class:

- Watch videos 4.5, 4.7, 4.8, 4.9

## Fill in the Blank

Given that  $f$  is an invertible function, fill in the blanks.

- (A) If  $f(-1) = 0$ , then  $f^{-1}(0) = \text{——}$ .
- (B) If  $f^{-1}(2) = 1$ , then  $f(1) = \text{——}$ .
- (C) If  $(2, 3)$  is on the graph of  $f$ , then  $\text{——}$  is on the graph of  $f^{-1}$ .
- (D) If  $\text{——}$  is on the graph of  $f$ , then  $(-2, 4)$  is on the graph of  $f^{-1}$ .

## Where is the error?

- We know that  $(f^{-1})' = \frac{1}{f'}$
- Let  $f(x) = x^2$ , restricted to the domain  $x \in (0, \infty)$

$$f'(x) = 2x \quad \text{and} \quad f'(4) = 8$$

- Then  $f^{-1}(x) = \sqrt{x}$

$$(f^{-1})'(x) = \frac{1}{2\sqrt{x}} \quad \text{and} \quad (f^{-1})'(4) = \frac{1}{4}$$

- So  $(f^{-1})'(4) \neq \frac{1}{f'(4)}$

## Derivatives of the inverse function

Let  $f$  be a one-to-one function.

Let  $a, b \in \mathbb{R}$  such that  $b = f(a)$ .

(A) Obtain a formula for  $(f^{-1})'(b)$  in terms of  $f'(a)$ .

*Hint:* This was done in Video 4.4

Take  $\frac{d}{dy}$  of both sides of  $f(f^{-1}(y)) = y$ .

(B) Obtain a formula for  $(f^{-1})''(b)$  in terms of  $f'(a)$  and  $f''(a)$ .

(C) *Challenge:* Obtain a formula for  $(f^{-1})'''(b)$  in terms of  $f'(a)$ ,  $f''(a)$ , and  $f'''(a)$ .

## Composition of one-to-one functions

Assume for simplicity that all functions in this problem have domain  $\mathbb{R}$ . Prove the following theorem.

### Theorem A

Let  $f$  and  $g$  be functions.

IF  $f$  and  $g$  are one-to-one,

THEN  $f \circ g$  is one-to-one.

Suggestion:

- (A) Write the definition of what you want to prove.
- (B) Figure out the formal structure of the proof.
- (C) Complete the proof (use the hypotheses!)

**Before next class:**

- **Watch videos 4.12, 4.13, 4.14**

# Computations - Exponentials and logarithms

Compute the derivative of the following functions:

(A)  $f(x) = e^{\sin x + \cos x} \ln x$

(B)  $f(x) = \pi^{\tan x}$

(C)  $f(x) = \ln [e^x + \ln \ln \ln x]$

(D)  $f(x) = \log_{10} (2x + 3)$

## Logarithm and Absolute Value

The function  $F$  is defined by the equation

$$F(x) = \ln |x|.$$

What is its derivative?

(A)  $F'(x) = \frac{1}{x}$

(B)  $F'(x) = \frac{1}{|x|}$

(C)  $F$  is not differentiable

## Logarithmic differentiation

Calculate the derivative of

$$g(x) = x^{\tan x}.$$

## More logarithmic differentiation

Calculate the derivative of

$$f(x) = (\sin x)^{\cos x} + (\cos x)^{\sin x}.$$

## More logarithmic differentiation

Calculate the derivative of

$$f(x) = (\sin x)^{\cos x} + (\cos x)^{\sin x}.$$

**What is wrong with this answer?**

$$\ln f(x) = (\cos x) \ln(\sin x) + (\sin x)(\ln \cos x)$$

$$\frac{d}{dx} [\ln f(x)] = \frac{d}{dx} [(\cos x) \ln(\sin x)] + \frac{d}{dx} [(\sin x)(\ln \cos x)]$$

$$\begin{aligned} \frac{f'(x)}{f(x)} = & -(\sin x) \ln(\sin x) + (\cos x) \frac{\cos x}{\sin x} \\ & + (\cos x) \ln(\cos x) + (\sin x) \frac{-\sin x}{\cos x} \end{aligned}$$

$$f'(x) = f(x) \left[ -(\sin x) \ln(\sin x) + (\cos x) \ln(\cos x) + \frac{\cos^2 x}{\sin x} - \frac{\sin^2 x}{\cos x} \right]$$

Calculate the derivative of

$$h(x) = \sqrt[3]{\frac{(\sin^6 x) \sqrt{x^7 + 6x + 2}}{3^x (x^{10} + 2x)^{10}}}$$

**Before next class:**

- **Watch videos 5.2, 5.3, 5.4**

## Definition of arctan

- (A) Sketch the graph of  $\tan$ .
- (B) Prove that  $\tan$  is not one-to-one.
- (C) Select the largest interval containing 0 such that the restriction of  $\tan$  to it is one-to-one. We define  $\arctan$  as the inverse of this restriction. Let  $x, y \in \mathbb{R}$

$$\arctan y = x \quad \Longleftrightarrow \quad ???$$

- (D) What is the domain of  $\arctan$ ? What is the range of  $\arctan$ ?

Sketch the graph of  $\arctan$ .

- (E) Compute

(E)  $\arctan(\tan(1))$

(E)  $\arctan(\tan(-6))$

(E)  $\arctan(\tan(3))$

(E)  $\tan(\arctan(0))$

(E)  $\arctan\left(\tan\left(\frac{\pi}{2}\right)\right)$

(E)  $\tan(\arctan(10))$

## Trig-inverse-trig

Find simple expressions for these quantities and state the domain on which they are valid:

(A)  $\sin (\arccos x)$

(C)  $\sec (\arctan x)$

(B)  $\sec (\arccos x)$

(D)  $\tan (\operatorname{arcsec} x)$

## Trig-inverse-trig

Find simple expressions for these quantities and state the domain on which they are valid:

(A)  $\sin(\arccos x)$

(C)  $\sec(\arctan x)$

(B)  $\sec(\arccos x)$

(D)  $\tan(\operatorname{arcsec} x)$

*Hint:* There are two standard ways to attack these problems:

- Use a trig identity  
e.g.: a trig identity relating  $\sin$  and  $\cos$  for (1)
- Or draw a right triangle with side lengths 1 and  $x$   
e.g.: with an angle  $\theta$  such that  $\cos \theta = x$  for (1)

If you need to take a square root, you must justify which branch (+ or -) you are choosing.

## A different type of logarithm

Calculate the derivative of

$$f(x) = \log_{x+1}(x^2 + 1)$$

*Note:* This is a new function. We have not given you a formula for it yet, That is on purpose.

## A different type of logarithm

Calculate the derivative of

$$f(x) = \log_{x+1}(x^2 + 1)$$

*Note:* This is a new function. We have not given you a formula for it yet, That is on purpose.

*Hint:* If you do not know where to start, remember the definition of logarithm:

$$\log_a b = c \iff a^c = b.$$
