

## Recall the definitions

1. **Type-1 improper integrals.** Let  $f$  be a bounded, continuous function on  $[c, \infty)$ . How do we define the improper integral

$$\int_c^{\infty} f(x) dx ?$$

2. **Type-2 improper integrals.** Let  $f$  be a continuous function on  $(a, b]$ , possibly with  $x = a$  as a vertical asymptote. How do we define the improper integral

$$\int_a^b f(x) dx ?$$

Calculate, using the definition of improper integral

$$\int_1^{\infty} \frac{1}{x^2 + x} dx$$

*Hint:*  $\frac{1}{x^2 + x} = \frac{(x + 1) - (x)}{x(x + 1)}$

## The most important improper integrals

Use the definition of improper integral to determine for which values of  $p \in \mathbb{R}$  each of the following improper integrals converges.

1.  $\int_1^{\infty} \frac{1}{x^p} dx$

2.  $\int_0^1 \frac{1}{x^p} dx$

3.  $\int_0^{\infty} \frac{1}{x^p} dx$

## Quick review

For which values of  $p \in \mathbb{R}$  is each of the following improper integrals convergent?

1.  $\int_1^{\infty} \frac{1}{x^p} dx$

2.  $\int_0^1 \frac{1}{x^p} dx$

3.  $\int_0^{\infty} \frac{1}{x^p} dx$

## Examples

1. Let  $f$  be continuous on  $[a, \infty)$ . Let  $A = \int_a^\infty f(x)dx$

Then  $A$  may be  $\begin{cases} \text{convergent (a number)} \\ \text{divergent} \begin{cases} \text{to } \infty \\ \text{to } -\infty \\ \text{"oscillating"} \end{cases} \end{cases}$

Give one example of each of the four results.

## Examples

1. Let  $f$  be continuous on  $[a, \infty)$ . Let  $A = \int_a^\infty f(x)dx$

Then  $A$  may be  $\begin{cases} \text{convergent (a number)} \\ \text{divergent} \begin{cases} \text{to } \infty \\ \text{to } -\infty \\ \text{"oscillating"} \end{cases} \end{cases}$

Give one example of each of the four results.

2. Now do the same thing for "type 2" improper integrals.

## Positive functions

- Let  $f$  be continuous on  $[a, \infty)$ . Let  $A = \int_a^{\infty} f(x) dx$

Then  $A$  may be  $\left\{ \begin{array}{l} \text{convergent (a number)} \\ \text{divergent} \left\{ \begin{array}{l} \text{to } \infty \\ \text{to } -\infty \\ \text{"oscillating"} \end{array} \right. \end{array} \right.$

## Positive functions

- Let  $f$  be continuous on  $[a, \infty)$ . Let  $A = \int_a^{\infty} f(x) dx$

Then  $A$  may be  $\left\{ \begin{array}{l} \text{convergent (a number)} \\ \text{divergent} \left\{ \begin{array}{l} \text{to } \infty \\ \text{to } -\infty \\ \text{"oscillating"} \end{array} \right. \end{array} \right.$

- Assume  $\forall x \geq a, f(x) \geq 0$ .

Which of the four options are still possible?

## Positive functions

- Let  $f$  be continuous on  $[a, \infty)$ . Let  $A = \int_a^\infty f(x) dx$

Then  $A$  may be  $\begin{cases} \text{convergent (a number)} \\ \text{divergent} \begin{cases} \text{to } \infty \\ \text{to } -\infty \\ \text{"oscillating"} \end{cases} \end{cases}$

- Assume  $\forall x \geq a, f(x) \geq 0$ .

Which of the four options are still possible?

- Assume  $\exists M \geq a$ , s.t.  $\forall x \geq M, f(x) \geq 0$ .

Which of the four options are still possible?

## A “simple” integral

What is  $\int_{-1}^1 \frac{1}{x} dx$  ?

## A “simple” integral

What is  $\int_{-1}^1 \frac{1}{x} dx$  ?

1.  $\int_{-1}^1 \frac{1}{x} dx = (\ln |x|) \Big|_{-1}^1 = \ln |1| - \ln |-1| = 0$

2.  $\int_{-1}^1 \frac{1}{x} dx = 0$  because  $f(x) = \frac{1}{x}$  is an odd function.

3.  $\int_{-1}^1 \frac{1}{x} dx$  is divergent.

## What is wrong with this computation?

$$\begin{aligned}\int_{-1}^1 \frac{1}{x} dx &= \lim_{\varepsilon \rightarrow 0^+} \left[ \int_{-1}^{-\varepsilon} \frac{1}{x} dx + \int_{\varepsilon}^1 \frac{1}{x} dx \right] \\&= \lim_{\varepsilon \rightarrow 0^+} \left[ \ln |x| \Big|_{-1}^{-\varepsilon} + \ln |x| \Big|_{\varepsilon}^1 \right] \\&= \lim_{\varepsilon \rightarrow 0^+} [\ln |-\varepsilon| - \ln |\varepsilon|] \\&= \lim_{\varepsilon \rightarrow 0^+} [0] = 0\end{aligned}$$

# Probability

A nonnegative function  $f$  defined on  $(-\infty, \infty)$  is called a **probability density function** if

$$\int_{-\infty}^{\infty} f(x) dx = 1.$$

The *mean* of a probability density function is defined as

$$\mu = \int_{-\infty}^{\infty} x f(x) dx.$$

$$\text{Let } f(x) = \begin{cases} Ce^{-kx} & \text{if } x \geq 0 \\ 0 & \text{if } x < 0 \end{cases}$$

1. For  $k > 0$ , find a constant  $C$  such that the function  $f$  is a probability density function.
2. Calculate the mean  $\mu$ .

## Collection of antiderivatives

Let  $f$  be a positive, continuous function with domain  $\mathbb{R}$ .

We know two ways to describe a collection of antiderivatives:

1.  $G(x) + C$  for  $C \in \mathbb{R}$ , where  $G$  is any one antiderivative.
2. The collection of functions  $F_a$  for  $a \in \mathbb{R}$ , where

$$F_a(x) = \int_a^x f(t)dt$$

# Collection of antiderivatives

Let  $f$  be a positive, continuous function with domain  $\mathbb{R}$ .

We know two ways to describe a collection of antiderivatives:

1.  $G(x) + C$  for  $C \in \mathbb{R}$ , where  $G$  is any one antiderivative.
2. The collection of functions  $F_a$  for  $a \in \mathbb{R}$ , where

$$F_a(x) = \int_a^x f(t)dt$$

These two collections are not always the same. Why not? Are they the same for some functions  $f$ ? When are they the same?

*Hint:*

## A simple BCT application

We want to determine whether  $\int_1^{\infty} \frac{1}{x + e^x} dx$  is convergent or divergent.

We can try at least two comparisons:

1. Compare  $\frac{1}{x}$  and  $\frac{1}{x + e^x}$ .
2. Compare  $\frac{1}{e^x}$  and  $\frac{1}{x + e^x}$ .

Try both. What can you conclude from each one of them?

# True or False - Comparisons

Let  $a \in \mathbb{R}$ .

Let  $f$  and  $g$  be continuous functions on  $[a, \infty)$ .

Assume that  $\forall x \geq a, \quad 0 \leq f(x) \leq g(x)$ .

What can we conclude?

1. IF  $\int_a^\infty f(x)dx$  is convergent, THEN  $\int_a^\infty g(x)dx$  is convergent.
2. IF  $\int_a^\infty f(x)dx = \infty$ , THEN  $\int_a^\infty g(x)dx = \infty$ .
3. IF  $\int_a^\infty g(x)dx$  is convergent, THEN  $\int_a^\infty f(x)dx$  is convergent.
4. IF  $\int_a^\infty g(x)dx = \infty$ , THEN  $\int_a^\infty f(x)dx = \infty$ .

# True or False - Comparisons II

Let  $a \in \mathbb{R}$ .

Let  $f$  and  $g$  be continuous functions on  $[a, \infty)$ .

Assume that  $\forall x \geq a, \quad f(x) \leq g(x)$ .

What can we conclude?

1. IF  $\int_a^\infty f(x)dx$  is convergent, THEN  $\int_a^\infty g(x)dx$  is convergent.
2. IF  $\int_a^\infty f(x)dx = \infty$ , THEN  $\int_a^\infty g(x)dx = \infty$ .
3. IF  $\int_a^\infty g(x)dx$  is convergent, THEN  $\int_a^\infty f(x)dx$  is convergent.
4. IF  $\int_a^\infty g(x)dx = \infty$ , THEN  $\int_a^\infty f(x)dx = \infty$ .

# True or False - Comparisons III

Let  $a \in \mathbb{R}$ .

Let  $f$  and  $g$  be continuous functions on  $[a, \infty)$ .

Assume that  $\boxed{\exists M \geq a \text{ s.t. } \forall x \geq M, \quad 0 \leq f(x) \leq g(x)}$ .

What can we conclude?

1. IF  $\int_a^\infty f(x)dx$  is convergent, THEN  $\int_a^\infty g(x)dx$  is convergent.
2. IF  $\int_a^\infty f(x)dx = \infty$ , THEN  $\int_a^\infty g(x)dx = \infty$ .
3. IF  $\int_a^\infty g(x)dx$  is convergent, THEN  $\int_a^\infty f(x)dx$  is convergent.
4. IF  $\int_a^\infty g(x)dx = \infty$ , THEN  $\int_a^\infty f(x)dx = \infty$ .

# What can you conclude?

Let  $a \in \mathbb{R}$ . Let  $f$  be a continuous, **positive** function on  $[a, \infty)$ . In each of the following cases, what can you conclude about

$\int_a^\infty f(x) dx$ ? Is it convergent, divergent, or we do not know?

1.  $\forall b \geq a, \exists M \in \mathbb{R}$  s.t.  $\int_a^b f(x) dx \leq M$ .

2.  $\exists M \in \mathbb{R}$  s.t.  $\forall b \geq a, \int_a^b f(x) dx \leq M$ .

3.  $\exists M > 0$  s.t.  $\forall x \geq a, f(x) \leq M$ .

4.  $\exists M > 0$  s.t.  $\forall x \geq a, f(x) \geq M$ .

Use BCT to determine whether each of the following is convergent or divergent

1.  $\int_1^{\infty} \frac{1 + \cos^2 x}{x^{2/3}} dx$

2.  $\int_1^{\infty} \frac{1 + \cos^2 x}{x^{4/3}} dx$

3.  $\int_0^{\infty} \frac{\arctan x^2}{1 + e^x} dx$

## BCT calculations

Use BCT to determine whether each of the following is convergent or divergent

1.  $\int_1^{\infty} \frac{1 + \cos^2 x}{x^{2/3}} dx$

4.  $\int_0^{\infty} e^{-x^2} dx$

2.  $\int_1^{\infty} \frac{1 + \cos^2 x}{x^{4/3}} dx$

5.  $\int_2^{\infty} \frac{(\ln x)^{10}}{x^2} dx$

3.  $\int_0^{\infty} \frac{\arctan x^2}{1 + e^x} dx$

## Rapid questions: convergent or divergent?

1.  $\int_1^{\infty} \frac{1}{x^2} dx$

4.  $\int_0^1 \frac{1}{x^2} dx$

7.  $\int_1^{\infty} \frac{3}{x^2} dx$

2.  $\int_1^{\infty} \frac{1}{\sqrt{x}} dx$

5.  $\int_0^1 \frac{1}{\sqrt{x}} dx$

8.  $\int_1^{\infty} \frac{1}{x^2 + 3} dx$

3.  $\int_1^{\infty} \frac{1}{x} dx$

6.  $\int_0^1 \frac{1}{x} dx$

9.  $\int_1^{\infty} \left( \frac{1}{x^2} + 3 \right) dx$

## Slow questions: convergent or divergent?

1.  $\int_1^{\infty} \frac{x^3 + 2x + 7}{x^5 + 11x^4 + 1} dx$

2.  $\int_1^{\infty} \frac{1}{\sqrt{x^2 + x + 1}} dx$

3.  $\int_0^1 \frac{3 \cos x}{x + \sqrt{x}} dx$

4.  $\int_0^1 \sqrt{\cot x} dx$

5.  $\int_0^1 \frac{\sin x}{x^{3/2}} dx$

6.  $\int_0^{\infty} e^{-x^2} dx$

7.  $\int_2^{\infty} \frac{(\ln x)^{10}}{x^2} dx$

## A harder calculation

For which values of  $a > 0$  is the integral

$$\int_0^{\infty} \frac{\arctan x}{x^a} dx$$

convergent?

## A variation on LCT

This is the theorem you have learned:

### Theorem (Limit-Comparison Test)

Let  $a \in \mathbb{R}$ . Let  $f$  and  $g$  be positive, continuous functions on  $[a, \infty)$ .

- IF the limit  $L = \lim_{x \rightarrow \infty} \frac{f(x)}{g(x)}$  exists and  $L > 0$
- THEN  $\int_a^\infty f(x) dx$  and  $\int_a^\infty g(x) dx$   
are both convergent or both divergent.

# A variation on LCT

This is the theorem you have learned:

## Theorem (Limit-Comparison Test)

Let  $a \in \mathbb{R}$ . Let  $f$  and  $g$  be positive, continuous functions on  $[a, \infty)$ .

**What if we change the hypotheses to  $L = 0$ ?**

1. Write down the new theorem (different conclusion).
2. Prove it.

*Hint:* If  $\lim_{x \rightarrow \infty} \frac{f(x)}{g(x)} = 0$ , what is larger  $f(x)$  or  $g(x)$ ?

## A variation on LCT - 2

This is the theorem you have learned:

### Theorem (Limit-Comparison Test)

Let  $a \in \mathbb{R}$ . Let  $f$  and  $g$  be positive, continuous functions on  $[a, \infty)$ .

- IF the limit  $L = \lim_{x \rightarrow \infty} \frac{f(x)}{g(x)}$  exists and  $L > 0$
- THEN  $\int_a^\infty f(x)dx$  and  $\int_a^\infty g(x)dx$   
are both convergent or both divergent.

**What if we change the hypotheses to  $L = \infty$ ?**

1. Write down the new theorem (different conclusion).
2. Prove it.

# Absolute Convergence

## Definition

The integral  $\int_a^\infty f(x) dx$  is called **absolutely convergent** when  $\int_a^\infty |f(x)| dx$  converges.

Prove that

- IF an improper integral is absolutely convergent
- THEN it is convergent

*Hint:* Consider the functions

$$f_+(x) = \begin{cases} f(x) & \text{if } f(x) \geq 0 \\ 0 & \text{if } f(x) \leq 0 \end{cases} \quad f_-(x) = \begin{cases} 0 & \text{if } f(x) \geq 0 \\ |f(x)| & \text{if } f(x) \leq 0 \end{cases}$$

Write  $f(x)$  and  $|f(x)|$  in terms of  $f_+(x)$  and  $f_-(x)$ . Use BCT.

# Dirichlet integral

$$\text{Let } f(x) = \begin{cases} \frac{\sin x}{x} & \text{if } x \neq 0 \\ 1 & \text{if } x = 0 \end{cases}$$

1. Is  $\int_0^1 f(x) dx$  an improper integral?

2. Show that  $\int_1^\infty \frac{\cos x}{x^2} dx$  is absolutely convergent.

*Hint:* Use BCT.

3. The same argument is inconclusive for  $\int_1^\infty f(x) dx$ . Why?

4. Show that  $\int_1^\infty f(x) dx$  is convergent

*Hint:* Use the definition of improper integral, not comparison tests. Use integration by parts with  $u = \frac{1}{x}$  and  $dv = \sin x dx$ .

*Note:* It is possible to prove that  $\int_1^\infty \frac{\sin x}{x} dx$  is not absolutely convergent.
