(C)
$$\int \cot x \, dx$$
 (G) $\int xe^{-x^2} \, dx$

(D)
$$\int x^2 \sqrt{x+1} dx$$
 (H) $\int e^{-x^2} dx$

Definite integral via substitution

This final answer is right, but the write-up is WRONG. Why?

Calculate
$$I = \int_0^2 \sqrt{x^3 + 1} \ x^2 dx$$

Wrong answer

Substitution: $u = x^3 + 1$, $du = 3x^2 dx$.

$$I = \frac{1}{3} \int_{0}^{2} \sqrt{x^{3} + 1} (3x^{2} dx) = \frac{1}{3} \int_{0}^{2} u^{1/2} du$$

$$= \frac{1}{3} \frac{2}{3} u^{3/2} \Big|_{0}^{2} = \frac{1}{9} (x^{3} + 1)^{2/3} \Big|_{0}^{2}$$

$$= \frac{2}{9} (2^{3} + 1)^{3/2} - \frac{2}{9} (0 + 1)^{3/2} = \frac{52}{9}$$

Integral of products of sin and cos

We want to compute

$$I = \int \sin^3 x \cos^2 x \, dx$$

- (A) Attempt the substitution $u = \sin x$
- (B) Attempt the substitution $u = \cos x$
- (C) One worked better than the other. Which one? Why? Finish the problem.

$$I = \int \sin^3 x \cos^2 x \, dx$$

- (A) Attempt the substitution $u = \sin x$
- (B) Attempt the substitution $u = \cos x$
- (C) One worked better than the other. Which one? Why? Finish the problem.
- (D) Assume we want to compute

$$\int \sin^n x \cos^m x \, dx$$

When will the substitution $u = \sin x$ be helpful? When will the substitution $u = \cos x$ be helpful?
