### MAT137 Lecture 30 — Related Rates

Before next class:

Watch videos 6.3, 6.4

### Lake ripple

We drop a pebble into a lake. It produces a circular ripple. When the radius is 2 meters and is increasing at a rate of 10cm/s, at what rate is the area increasing?

### Math party

The MAT137 TAs wanted to rent a disco ball for their upcoming party. However, since they are poor, they could only afford a flashlight. At the party, one TA is designated the "human disco ball". The TA stands in the center of the room pointing the flashlight horizontally and spins at 3 revolutions per second. (Yes, they are that fast. Ask your TA to demonstratel if you don't believe me!) The room is square with side length 8 meters. At which speed is the light from the flashlight moving across the wall when it is 3 meters away from a corner?

### Sleepy ants

Two ants are taking a nap. The first one is resting at the tip of the minute hand of a cuckoo clock, which is 25 cm long. The second one is resting at the tip of the hour hand, which is half the length. At what rate is the distance between the two ants changing at 3:30?

#### The kite

Mary Poppins is flying a kite. The kite is 21 meters above the ground and it is being blown horizontally by the wind at 2 m/s. Mary's hands are 1 meter above the ground. Right now 30 meters of string are out. At what rate is the string being released from Mary's hands?

### MAT137 Lecture 31 — Applied optimization

Before next class:

Watch videos 6.6, 6.7, 6.9

### The classic farmer problem

A farmer has 300m of fencing and wants to fence off a rectangular field and add an extra fence that divides the rectangular area in two equal parts down the middle. What is the largest area that the field can have?

### Distance

Find the point on the parabola  $y^2 = 2x$  that is closest to the point (1,4).

### A matter of perspective

A painting in an art gallery has height h and is hung so that its lower edge is a distance a above your eye. How far from the wall should you stand to get the best view?

#### **Dominion**

Dominion is a board game where, among other things, players buy cards worth victory points. The player with the most victory points wins.

It is your last turn and you can only buy "duchies" and "dukes". A duchy is worth 3 victory points. A duke is worth as many victory points as duchies you have. Each duchy costs 3 coins, and each duke costs 3 coins. You have not bough any duke or duchy yet.

If you have *N* coins, how many dukes and how many duchies should you buy?

#### Fire

You hear a scream. You turn around and you see Alfonso is on fire. Literally! Luckily, you are next to a straight river. Alfonso is 10 meters away from the river and you are 5 meters away from the point P on the river closest to Alfonso. You are carrying an empty bucket. You can run twice as fast with an empty bucket as you can run with a full bucket. How far from the point P should you fill your bucket in order to get to Alfonso with a bucket full of water as fast as possible?

MAT137 Lecture 32 — Indeterminate forms and L'Hôpital's Rule

### Before next class:

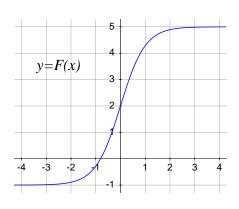

• Watch videos 6.10, 6.12

### Limits from graphs

### Compute:

(A) 
$$\lim_{x\to 0} \frac{H(x)}{H(2+3x)-1}$$

(B) 
$$\lim_{x \to 2} \frac{F^{-1}(x)}{x - 2}$$

# Polynomial vs Exponential

(A) Use L'Hôpital Rule to compute

$$\lim_{x\to\infty}\frac{x^7+5x^3+2}{e^x}$$

# Polynomial vs Exponential

(A) Use L'Hôpital Rule to compute

$$\lim_{x \to \infty} \frac{x^7 + 5x^3 + 2}{e^x}$$

(B) Make a conjecture for the value of

$$\lim_{x\to\infty}\frac{x^N}{e^x}$$

where N is a positive integer. Prove it by induction.

### Computations

#### Calculate:

(A) 
$$\lim_{x \to 2} \frac{x^2 + 2x - 6}{x^2 + 3x - 10}$$

(B) 
$$\lim_{x \to 0} \frac{e^{2x^2} - \cos x}{x \sin x}$$

(C) 
$$\lim_{x \to \infty} x^3 e^{-x}$$

(D) 
$$\lim_{x\to\infty}\frac{e^x+e^{-x}}{e^x-e^{-x}}$$

(E) 
$$\lim_{x\to 0} x \sin \frac{2}{x}$$

(F) 
$$\lim_{x \to \infty} x \sin \frac{2}{x}$$

(G) 
$$\lim_{x \to \infty} x \cos \frac{2}{x}$$

(H) 
$$\lim_{x \to 1} \left[ (\ln x) \tan \frac{\pi x}{2} \right]$$

MAT137 Lecture 33 — Indeterminate forms and L'Hôpital's Rule 2

Before next class:

Watch videos 6.13, 6.14

# Indeterminate?

Which of the following are indeterminate forms for limits?

If any of them isn't, then what is the value of such limit? (A) 
$$\frac{0}{0}$$
 (E)  $\frac{\infty}{\infty}$  (I)  $\sqrt{\infty}$  (N)  $0^{\infty}$ 

(A) 
$$\frac{0}{0}$$
 (E)  $\frac{\infty}{\infty}$  (I)  $\sqrt{\infty}$  (N)  $0^{\infty}$ 

(K) 
$$1^{\infty}$$
 (C)  $\infty^0$ 

(C) 
$$\frac{0}{1}$$
 (G)  $0 \cdot \infty$  (D)  $\frac{\infty}{0}$  (H)  $\infty \cdot \infty$ 

(L) 
$$I \propto (Q) \propto^{\infty}$$
  
(M)  $0^0$  (R)  $\infty^{-\infty}$ 

(B) 
$$\frac{0}{\infty}$$
 (F)  $\frac{1}{\infty}$  (J)  $\infty - \infty$  (O)  $0^{-\infty}$  (K)  $1^{\infty}$  (P)  $\infty^{0}$  (C)  $\frac{0}{1}$  (G)  $0 \cdot \infty$  (L)  $1^{-\infty}$  (Q)  $\infty^{\infty}$ 

# Infinity minus infinity

Calculate:

(A) 
$$\lim_{x \to 0} \left[ \frac{\csc x}{x} - \frac{\cot x}{x} \right]$$

(B) 
$$\lim_{x \to \infty} [\ln(x+2) - \ln(3x+4)]$$

(C) 
$$\lim_{x \to 1} \left[ \frac{2}{x^2 - 1} - \frac{1}{x - 1} \right]$$

(D) 
$$\lim_{x \to -\infty} \left[ \sqrt{x^2 + 3x} - \sqrt{x^2 - 3x} \right]$$

### Exponential indeterminate forms

### Calculate:

(A) 
$$\lim_{x\to 0} [1+2\sin(3x)]^{4\cot(5x)}$$

(B) 
$$\lim_{x \to \infty} \left( \frac{x+2}{x-2} \right)^{3x}$$

(C) 
$$\lim_{x\to 0^+} x^x$$

(D) 
$$\lim_{x \to \frac{\pi}{2}^-} (\tan x)^{\cos x}$$

(E) 
$$\lim_{x \to 0} \left( \frac{\sin x}{x} \right)^{1/x^2}$$

### Backwards L'Hôpital

Construct a polynomial P such that

$$\lim_{x\to 1} \frac{P(x)}{e^x - e \cdot x} = \frac{1}{e}$$

### MAT137 Lecture 34 — Concavity

### Before next class:

Watch videos 6.15, 6.16, 6.17

### Critique this solution

- Let f be a function with domain  $\mathbb{R}$ .
- Assume f(0) = 0 and that f is differentiable.
- Calculate  $\lim_{x\to 0} \frac{f(x)}{\sqrt[3]{x}}$ .

#### "Solution"

The limit has the intermediate form 0/0, so we can use l'Hôpital's rule"

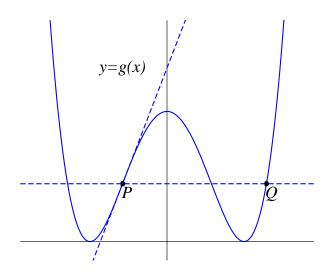

$$\lim_{x \to 0} \frac{f(x)}{\sqrt[3]{x}} = \lim_{x \to 0} \frac{f'(x)}{\frac{1}{3}x^{-2/3}}$$

$$= \lim_{x \to 0} \left[ 3x^{2/3} f'(x) \right]$$

$$= 3 \cdot 0 \cdot f'(0) = 0.$$

# Find the coordinates of P and Q

$$g(x) = x^4 - 6x^2 + 9$$

### True or False – Concavity and inflection points

Let f be a differentiable function with domain  $\mathbb{R}$ . Let  $c \in \mathbb{R}$ . Let f be an interval. Which implications are true?

- (A) IF f is concave up on I, THEN  $\forall x \in I$ , f''(x) > 0.
- (B) IF  $\forall x \in I$ , f''(x) > 0, THEN f is concave up on I.
- (C) IF f is concave up on I THEN f' is increasing on I.
- (D) IF f' is increasing on I, THEN f is concave up on I.
- (E) IF f has an I.P. at c, THEN f''(c) = 0.
- (F) IF f''(c) = 0, THEN f has an I.P. at c.
- (G) IF f has an I.P. at c, THEN f' has a local extremum at c
- (H) IF f' has a local extremum at c, THEN f has an I.P. at c.

I.P. = "inflection point"

# Monotonicity and concavity

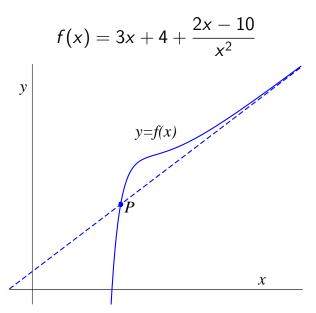

- Let  $f(x) = xe^{-x^2/2}$ .
- (A) Find the intervals where f is increasing or decreasing, and its local extrema.
- (B) Find the intervals where f is concave up or concave down, and its inflection points.
- (C) Calculate  $\lim_{x\to\infty} f(x)$  and  $\lim_{x\to-\infty} f(x)$ .
- (D) Using this information, sketch the graph of f.

### MAT137 Lecture 35 — Asymptotes

#### Before next class:

Watch videos No videos. You're free!

### Find the coordinates of P

### Hyperbolic tangent

The function tanh, defined by

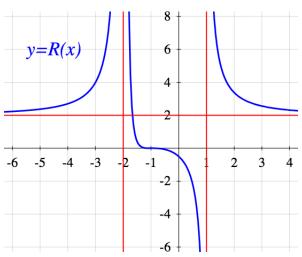

$$\tanh x = \frac{e^x - e^{-x}}{e^x + e^{-x}},$$

is called the "hyperbolic tangent".

- (A) Find its two asymptotes
- (B) Study its monotonicity
- (C) Study its concavity
- (D) With this information, sketch its graph.

### Backwards graphing

R is a rational function (a quotient of polynomials). Find its equation.

### MAT137 Lecture 36 — Curve Sketching

Before next class:

Watch videos 7.1, 7.2

### A very hard function to graph

The function  $G(x) = xe^{1/x}$  is deceiving. To help you out:

$$G'(x) = \frac{x-1}{x}e^{1/x}, \qquad G''(x) = \frac{e^{1/x}}{x^3}$$

- (A) Carefully study the behaviour as  $x \to \pm \infty$ . You should find an asymptote, but it is not easy.
- (B) Carefully study the behaviour as  $x \to 0^+$  and  $x \to 0^-$ . The two are very different.
- (C) Use G' to study monotonocity.
- (D) Use G'' to study concavity.
- (E) Sketch the graph of G.

### Come to the dark side

Help us write a difficult question for Test 3! We will ask you to compute a limit like this

$$\lim_{x\to 0}\frac{e^x+e^{-x}-2\cos x+bx^N}{x^6}$$

where b is a real number and N is a natural number that we have not chosen yet.

We do not want the answer to be 0 or  $\infty$  or  $-\infty$  or "DNE", because you could guess that randomly.

What values of *b* and *N* should we choose? What will the value of the limit be?

# A polynomial from 3 points

Construct a polynomial that satisfies the following three properties at once:

- (A) It has an inflection point at x = 2
- (B) It has a a local extremum at x = 1
- (C) It has y-intercept at y = 1.

### Fractional exponents

Let 
$$h(x) = \frac{x^{2/3}}{(x-1)^{2/3}}$$
. Its first two derviatives are

$$h'(x) = \frac{-2}{3x^{1/3}(x-1)^{5/3}}$$
  $h''(x) = \frac{2(6x-1)}{9x^{4/3}(x-1)^{8/3}}$ 

- (A) Find all asymptotes of h
- (B) Study the monotonicity of h and local extrema
- (C) Study the concavity of *h* and inflection points
- (D) With this information, sketch the graph of h
